Serving industries around the world, GSNK® lubricants and lubrication systems are essential in maximizing performance, productivity and uptime. leveraging our expertise in tribology and anti-friction bearings, we've developed lubricants – including 27 formulations of grease – that help ensure smooth operation. Our single- and multi-poinT lubricators, in addition to interlube automated lubrication delivery systems, dispense precise amounts of grease, saving time and money over manual application.

MAIN TENANCE TOOLS

GSNK® maintenance tools may extend bearing life by facilitating proper installation, removal and service. They also help simplify maintenance practices. We provide induction heaters, impact fitting tools and hydraulic and mechanical pullers.

SERVICES

Used bearings and related components often can be returned to their original specifications with less time and costs than purchasing new. We offer complete remanufacture and reconditioning services for many components, including bearings, chocks, housings, rolls and more.

Our gearbox repair services are globally recognized for power transmission solutions in heavy industrial markets, repairing virtually any Large gearbox make or model, with onsite emergency breakdown service available if needed.

GSNK® offers a full range of maintenance and reconditioning services through our remanufacturing and repair operations. Using these services can lead to improved plant efficiency and reduced overall production costs.

Beyond bearing repair and depending on the location, we offer chock maintenance and roll rebuilding to help mill operators get the most out of their chock/bearing assembly.

In addition, our millTec® rolling mill program provides around-the-clock management of the roll shop with the goal of minimizing operational costs and downtime.

TRAINING

We offer industry-specific training programs designed for plant professionals, as well as onsite customized training to meet your specific needs. Our metals industry training programs are available at select locations around the world and cover every phase of bearing performance in the metal-making environment. Class time is balanced with extensive hands-on training and tours of GSNK facilities.

STORAGE

GSNK suggests the following storage guidelines for our finished products (bearings, components and assemblies, referred to as "products"):

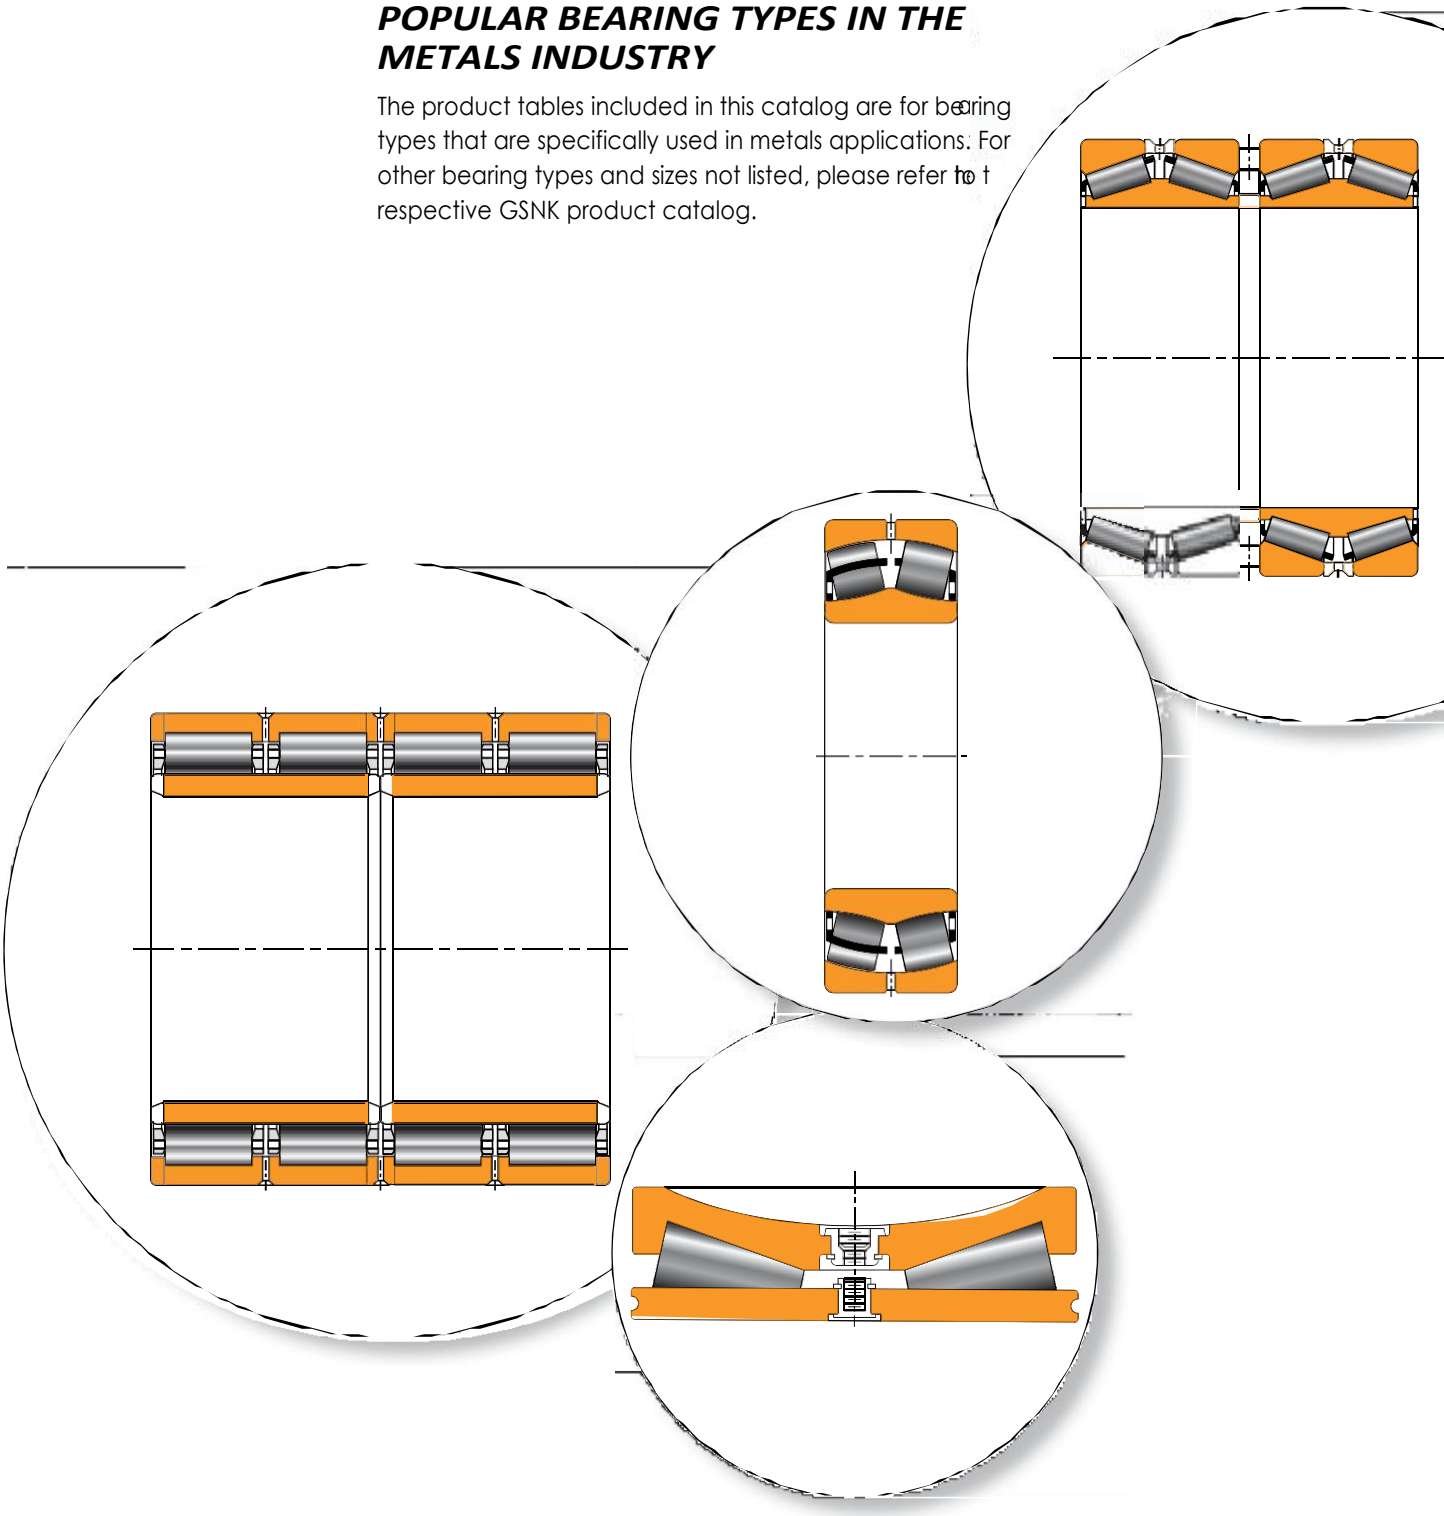
- Unless directed otherwise by GSNK, products should be kept in their original packaging until they are ready to be placed into service.
- Do not remove or alter any labels or stencil markings on the packaging.
- Products should be stored in such a way that the packaging is not pierced, crushed or otherwise damaged.
- After a product is removed from its packaging, it should be placed into service as soon as possible.
- When removing a product that is not individually packaged from a bulk pack container, the container should be resealed immediately after the product is removed.
- Do not use product that has exceeded its shelf life as defined in the GSNK shelf life guidelines statement.
- The storage area temperature should be maintained between 0° c (32° f) and 40° c (104° f); temperature fluctuations should be minimized.
- The relative humidity should be maintained below 60 percent and the surfaces should be dry.
- The storage area should be kept free from airborne contaminants such as, but not limited to, dust, dirt, harmful vapors, etc.
- The storage area should be isolated from undue vibration.
- Extreme conditions of any kind should be avoided.

Due to the fact that GSNK is not familiar with your particular storage conditions, we strongly suggest following these guidelines. However, you may be required by circumstances or applicable government requirements to adhere to stricter storage requirements.

Most bearing components typically ship protected with a corrosion-preventive compound that is not a lubricant. These components may be used in oil-lubricated applications without removal of the corrosion-preventive compound. When using some specialized grease lubrications, we advise you to remove the corrosion-preventive compound before packing the bearings components with suitable grease.

POPULAR BEARING TYPES IN THE METALS INDUSTRY

The product tables included in this catalog are for bearing types that are specifically used in metals applications. For other bearing types and sizes not listed, please refer to the respective GSNK product catalog.



CONTINUOUS CASTING

The continuous caster presents one of the most challenging environments for bearings. caster-roll support bearings are subjected to high loads and low rotational speeds, often at elevated temperatures. Below the bender segments, the GSNK ideal solution combines our high-performance spherical roller bearing for the fixed position and our latest design innovation, the GSNK® adaPT™ bearing, for the floating position.

ADAPT BEARINGFEATURES

- Bearing boundary Dimensions conform to standard isO Dimensions, but the internal geometry and separable inner ring concepts are unique.
- Simultaneous full misalignment and axial displacement capabilities, for optimum performance.
- All bearings have a misalignment capability of +/− 0.5 degrees (8.7 milliradians).

ASSEMBLY NOTES

The ADAPT bearing is designed to be used in a float position on a caster roll, and can be mounted at either the roll's center or end support position, depending on the caster and roll configuration.

The end support position requires an end plate to clamp the bearing. The end plate geometry needs to be validated to ensure the adaPT bearing is correctly located with an end plate that restrains the adaPT outer assembly as shown below.

If the end plate does not restrain the roller assembly, the customer should modify or replace the original end plate with one that will clamp the adaPT bearing inner ring and capture the outer assembly. The correct diameter for this end plate is given in the product data tables.

Please refer to GSNK adaPT™ Bearing installation guide for more information.

mounting and installation procedures for each application should be reviewed prior to installing the adaPT bearing. contact your GSNK engineer for assistance.

⚠ WARNING ***Failure to OBSERVE the following warnings could create a risk of serious injury.***

ADAPT™ bearings feature a separable inner ring. Care must be taken when handling or installing a fully assembled bearing to prevent the inner ring from accidentally sliding out of the assembly. When using this bearing to replace a unitized bearing it is important to check the design of the installation for positive retention on the shaft. Proper maintenance and handling practices are critical. always follow installation instructions and maintain proper lubrication.

cf1, cf2, ...	**Customer finish:** The inner ring is supplied with added stock (semi-finished) on the outside diameter to account for additional finish grinding required after shrink-fitting the inner ring set onto the neck in order to suite the mounted ric requirement.

nOTe: most long-product applications use c4 or sometimes c3 radial internal clearances.
The radial internal clearance (ric) for the bearing assembly must be included when ordering either the complete assembly or the inner-ring set. it is advisable to order the inner-ring set independent of the outer-ring set when the final grind of the inner-ring O.D. is accomplished after mounting on the roll neck.

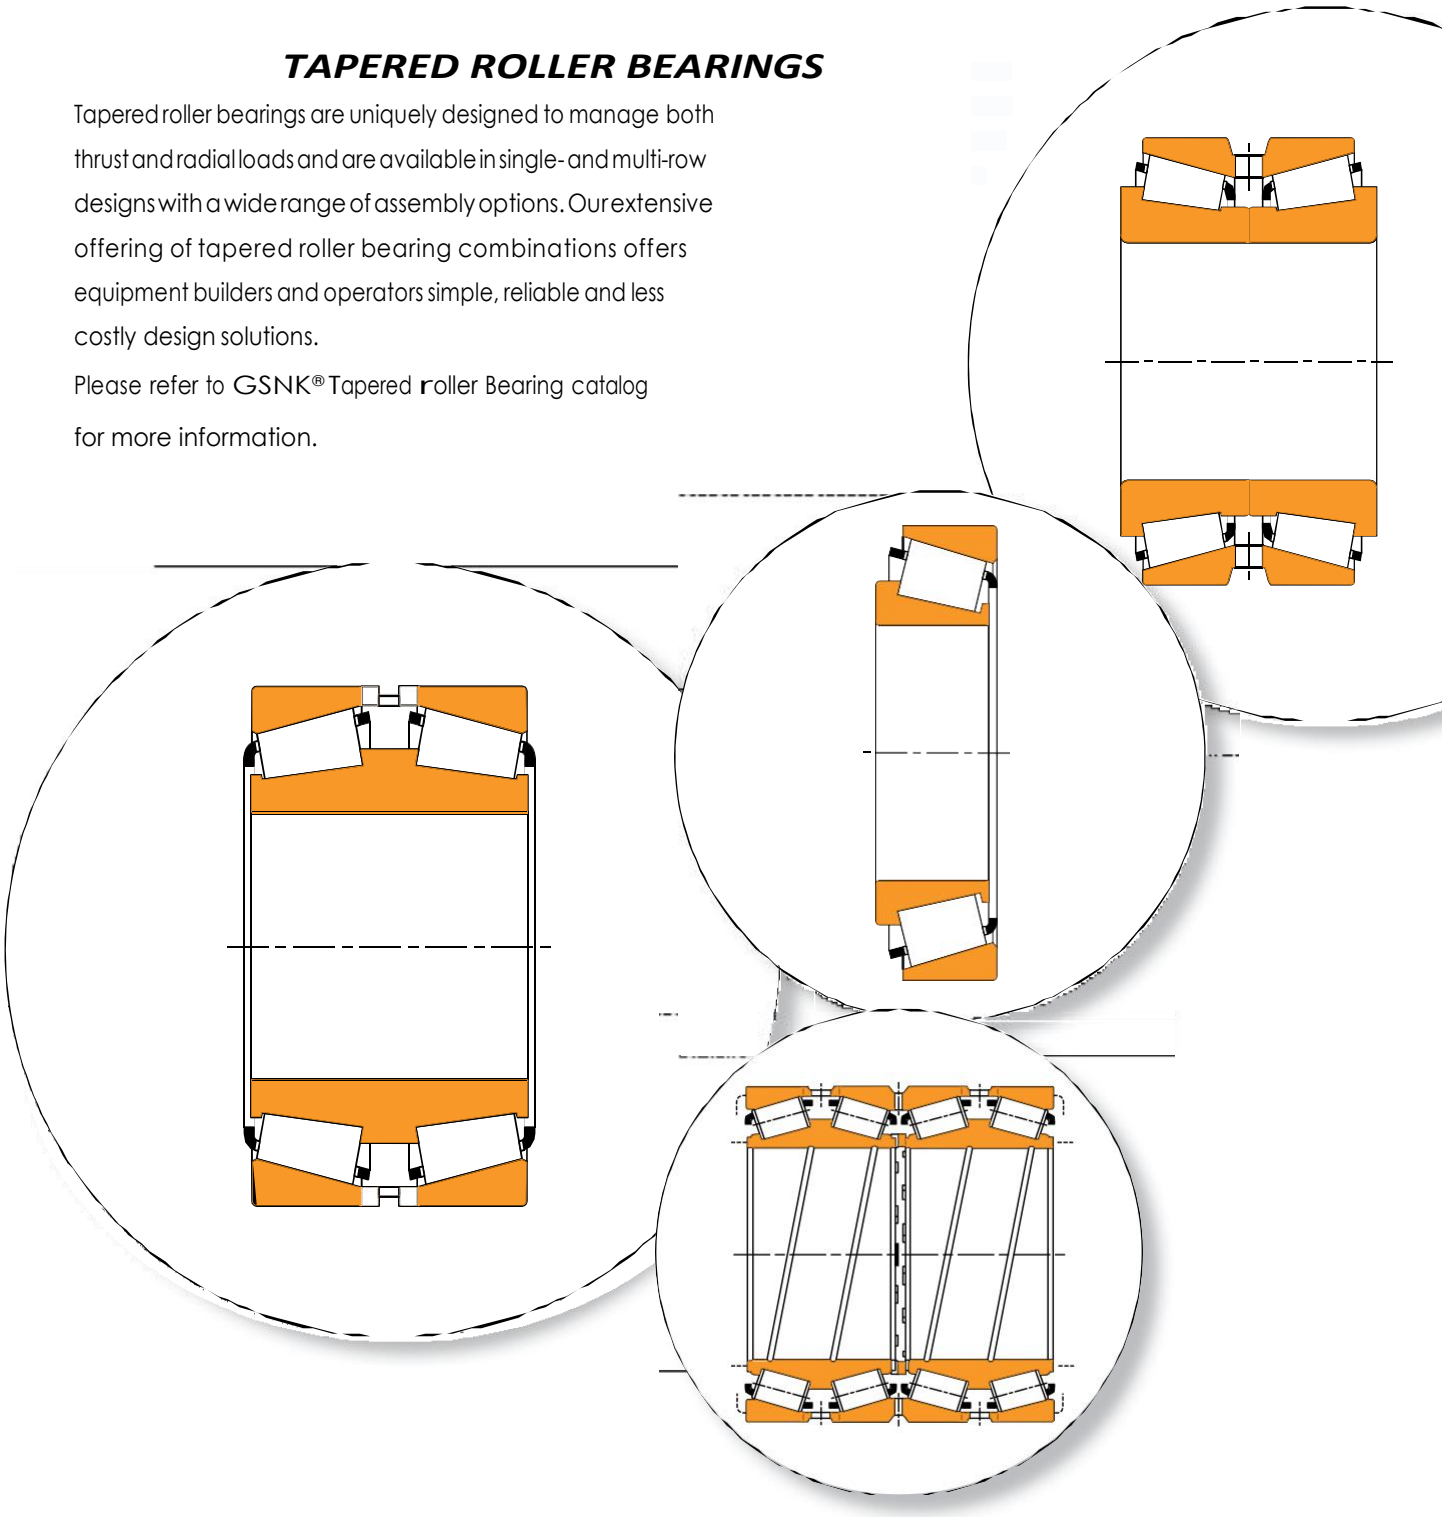
TAPERED ROLLER BEARINGS

Tapered roller bearings are uniquely designed to manage both thrust and radial loads and are available in single- and multi-row designs with a wide range of assembly options. Our extensive offering of tapered roller bearing combinations offers equipment builders and operators simple, reliable and less costly design solutions.

Please refer to GSNK® Tapered roller Bearing catalog for more information.



NOMENCLATURE

For detailed nomenclature information, consult GSNK® Tapered roller Bearing catalog as reference.

ABMA INCH PART-NUMBERING SYSTEM

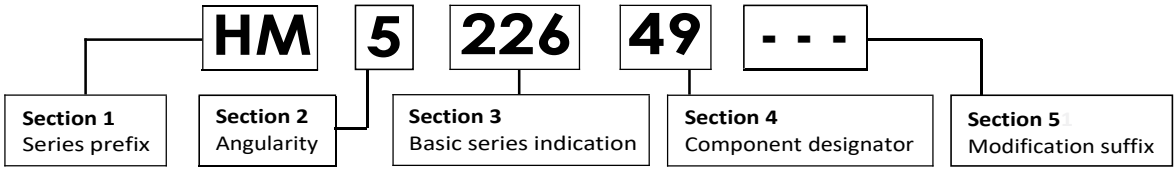


Fig. 41. ABMA inch part-numbering system example.

Section 1 – Series prefix

The series prefix consists of one or two letters that designate the duty class for which the bearing is designed. additional prefix letters are available in table 52 on page 89.

TABLE 50. COMMON PREFIX LETTERS

Prefix	Class Designation	Prefix	Class Designation
EL	Extra light	HM	Heavy medium
LL	Lighter than light	H	Heavy
L	Light	HH	Heavier than heavy
LM	Light medium	EH	Extra heavy
M	Medium	T	Thrust only

SECTION 2 – Angularity Designator

the first digit following the prefix represents the angle coding as determined by the included angle of the outer ring.

TABLE 51. ANGULARITY DESIGNATOR

Included Outer-ring Angle	Code	Included Outer-ring angle	Code
0° to 23° 59' 59.99 in.	1	30° 30' to 32° 29' 59.99 in.	6
24° to 25° 29' 59.99 in.	2	32° 30' to 35° 59' 59.99 in.	7
25° 30' to 26° 59' 59.99 in.	3	36° to 44° 59' 59.99 in.	8
27° to 28° 29' 59.99 in.	4	45° and over; excluding thrust	9
28° 30' to 30° 29' 59.99 in.	5		

Section 3 – Basic series indication

The two or three digits following the angularity designator are reserved for the basic series indication. refer to ABMA standard 19.2 for more information.

Section 4 – Component designator

The last two numerical digits indicate the component number.

Section 5 – Modification suffix letters

The suffix may consist of one to three letters in pre-arranged combinations, indicating modifications in external form or internal arrangement. Table 52 on page 89 lists the most common prefix and suffix designations.

THRUST TAPERED ROLLER BEARINGS

Two-row tapered roller bearings designed with steep angles to accommodate thrust loads. The TDIK bearing is typically used in axial positions for work rolls when the axial loads are high and in backup roll thrust positions.

THRUST SPHERICAL ROLLER BEARINGS

GSNK thrust spherical roller (TSR) bearings are used as axial positions for work rolls on long product mills and flat product cold tandem mills when the axial loads are high, and in auxiliary equipment applications.

Please refer to GSNK® Thrust Bearing catalog for more information on our complete range.

Fig. 59. Thrust spherical roller bearing.

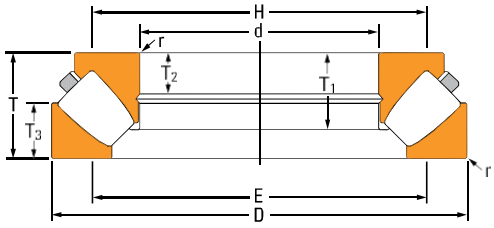

Fig. 60. TSR-EM bearing.

OVERALL DIMENSIONS:

d – Bore

d – Outer diameter

T – width

e – Housing shoulder diameter

H – shaft shoulder diameter

r – fillet radius (max.)

NOMENCLATURE

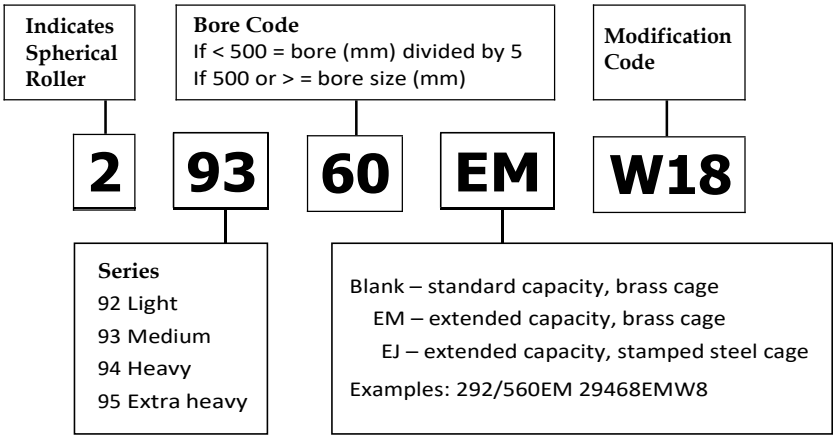

Fig. 61. Thrust spherical roller bearing nomenclature.

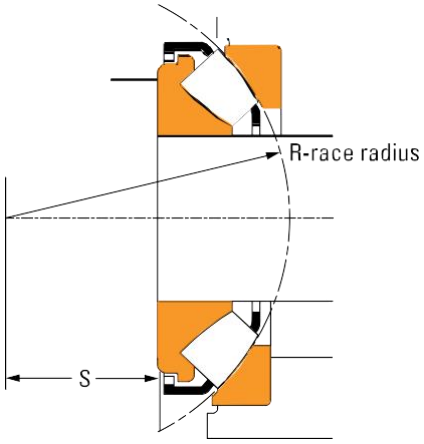

Fig. 62. TSR misalignment handling.

GSNK TSR bearings are capable of handling the high degrees of misalignment seen in most applications.

THRUST SPHERICAL ROLLER BEARING DESIGN TYPES

CC CAGE TYPE

- One spherical inner ring.[1]
- One spherical outer ring.
- CC steel cage.

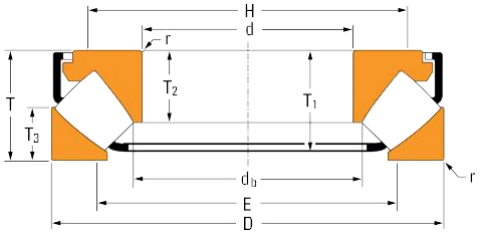

Fig. 63. EJ Cage Type.

EM CAGE TYPE

- One spherical inner ring.[2]
- One spherical outer ring.
- em machined brass cage.

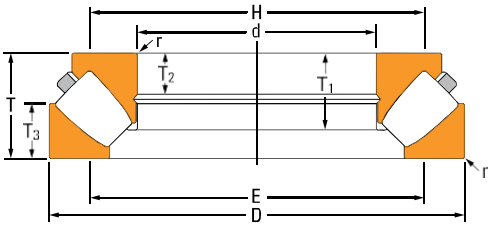

Fig. 64. EM Cage Type.

[1] For applications where the inner ring is axially located an eJ Cage Type is suggested. The maximum diameter of the spacer clamping the inner ring of the eJ Cage Type is indicated by dimension d_b.
[2] The em Cage Type is not preferred for applications where the inner ring is axially located. contact your GSNK engineer for additional information on clamping loads and Dimensions of the inner ring spacer when using em Cage Types.
